Lake Ditch Watershed Maintenance Report

# Surveyor's Maintenance Report

## Lake Ditch Regulated Drain

### August 2013

#### **Lake Ditch Watershed Assessment Report**

This document fulfills the requirements set forth in Section 38, IC 36-9-27, regarding the continued maintenance of the Lake Ditch Regulated Drain located in Adams, Ashland, Gregg and Monroe Townships in Morgan County, Indiana. The upper portion of the watershed extends into Hendricks County, but no portion of the regulated drain itself is within Hendricks County.

The Lake Ditch Regulated Drain (Cook Arm of E.R. Robards) is the main drain in a combination of regulated drains. Other regulated drains within the watershed of Lake Ditch include the Noah K. Mann, Robert Bayliss, Bayliss Lateral No. 1, Bayliss Lateral No. 2, Victor Allen, Smith / McClellan, Byrum S. Crone, T.C. Murphy, Oscar G. York, Elvin E. Hurt, and Snake Creek. Lake Ditch and regulated tributaries have a combined tile drain length of 2,230 feet and open drain length of over 25-miles. The network of regulated drains extends from its confluence with Mill Creek mostly east and north to Monrovia and the northern Morgan County border with Hendricks County. One drain, T.C. Murphy, is slightly disconnected from the main drain and is located ½ mile south of SR 142 near Herbemont Road.

The Lake Ditch watershed drains over 41 square miles. 2.3 square miles are within Hendricks County. The remaining 38.9 square miles is within Morgan County. The land use in the watershed area is predominately row cropped agricultural with scattered residential. Within Morgan County the Town of Eminence and the western part of Monrovia are within the watershed. In Hendricks County the southern portion of Hazelwood is located in the watershed. There is currently no maintenance assessment for the watershed.

A petition was filed with the Morgan County Drainage Board to put the drain back on assessment. As part of this process, the county appropriated funds to clean the ditch prior to this assessment. It is important to note, that the cost for this first cleaning is not included in the maintenance assessment within this report. In order to keep the benefits of this initial work a maintenance assessment and maintenance plan for the watershed need to be developed.

#### **Field Observations**

Field observations were performed following the initial cleaning and maintenance efforts in 2012. Significant dipping and clearing work was performed along the entirety of the open drains. Some rock was placed to stabilize banks or under bridges as needed. The work performed appears to be of acceptable quality.

During field observations several blow holes were noted in the only tile drain within the network, the Crone Drain. The holes were located adjacent to McClure Road on the south side of the road. It appears this drain is in need of repair.

## **Maintenance**

As stated previously, in 2012 the entire drain system was maintained. To keep these benefits of this work, an ongoing maintenance program will be necessary. Typical maintenance consists of cutting woody vegetation along open ditch banks, a woody vegetation spray program, bank stabilization projects, dipping of accumulated sediment, and spot removal of open drain obstructions. Additionally, we recommend the existing tile drains be replaced under maintenance as priority calls for and funds allow. For the purposes of establishing the maintenance assessment replacement of 300 linear feet of tile was estimated per year.

The open drain appears to be in fair condition. Periodic maintenance should be continued to maintain capacity. Maintenance will include spraying, removal of sediment, and obstruction removal. Periodic maintenance should follow the existing guidelines for the county spray program, and removal of sediment every 30 years +/- . Some areas will need sediment removed sooner than 30 years, but for the purposes of setting up the maintenance assessment a 30 year sediment removal program is recommended. Spraying of woody vegetation along the open ditches is recommended on a 3 year rotation. Other maintenance costs to consider for the drain are bank stabilization projects (riprap), water quality monitoring, surveying, and engineering.

## **Combining Drains**

In reviewing the watershed it is recommended the regulated drains within it be combined into one drain. The regulated drains within the watershed are 98% open ditches. Along with this similarity, there is uniformity in both soils and topography throughout the watershed. There are 12 regulated drains that comprise the Lake Ditch Regulated Drain Watershed. It is recommended these drains be combined under (1) Lake Ditch Regulated Drain per Section IC 36-9-27-41 of the Indiana Code. The names of the drains to be combined are listed below:

Lake Ditch (Cook Arm of E.R. Robards)  
Noah K. Mann  
Robert Bayliss  
Bayliss Lateral No. 1  
Bayliss Lateral No. 2  
Victor Allen  
Smith / McClellan  
Byrum S. Crone  
T.C. Murphy  
Oscar G. York  
Elvin E. Hurt  
Snake Creek

## **Financial Analysis**

To establish appropriate assessments, a financial analysis of the necessary maintenance work was completed. A 30 year life cycle period was considered for this analysis. To fully consider

the impact of inflation within the 30 year period a 2% increase in contractor based maintenance costs was considered. This includes the spray program, sediment dipping, and tile replacement. Other local counties were contacted for prices on their spray program and sediment dipping. A high and low cost for these was averaged. Once averaged, costs due to inflation at the end of 30 years were calculated. These inflated costs were then averaged with the current costs to establish the cost used for the assessment. Using these principals, the cost utilized in the assessment should be valid for at least 15 years before they need to be reviewed again.

A brief summary of the maintenance assessment costs are shown below. A more detailed analysis may be found in the Lake Ditch Financial Analysis Appendix.

<b>Program</b>	<b>Feet per Year</b>	<b>Unit Cost</b>	<b>Total Cost</b>
Spray	44,015	\$0.35	\$15,405.25
Sediment Dipping	4,401.5	\$7.40	\$32,571.10
Tiling	300	\$20.00	\$6,000.00
Surveying, Engineering, Bank Stabilization	N/A	N/A	\$5,500.00
<b>Total Maintenance Cost Estimated Per Year</b>			<b>\$59,476.35</b>

### **Maintenance Assessments**

Maintenance assessments per year will be applied over the entire watershed. Numerous iterations of calculations were run to obtain an assessment that closely matches the estimated maintenance costs per year. A final assessment of \$2.00 per acre with a \$10 per parcel minimum was established. The total assessment proposed to be collected utilizing this system is \$59,384.76. This is very nearly the costs estimated and is within acceptable tolerances.

Three areas within the watershed do not have parcels associated with them. The Indiana Department of Transportation maintains several state highways and Interstate 70 within the watershed. The Morgan County Highway department also has an extensive county road system within the watershed. Lastly, Hendricks County has 1,462 acres within the Lake Ditch Watershed. The \$2.00 per acre assessment will be applied to all three of these municipal entities. Their total assessments are shown below.

INDOT - \$601.00 (300.5 acres)  
Morgan County Highway - \$542.00 (271 acres)  
Hendricks County - \$2,924.00 (1,462 acres)

A full maintenance assessment roll may be found in the appendix attached.
